$\alpha = 0.60$: distributions after the first three LP rounds
Finite matrices: 2 of 3 paths feasible at the first LP
Round 1
Round 2
Round 3
Frozen: 55.1%
Population: 54.3%
Frozen: 62.6%
Population: 60.1%
Frozen: 66.4%
Population: 63.8%
Conditional density
Free coordinate
Cumulative probability
Excess row margin $u - \kappa_t$
Finite LPs (2 feasible paths)
Population approximation
