$\alpha = 0.60$: numerical population trajectories
3 of 3 runs reach the preset cold-reserve test; each stops at its first passing round
(a) Prescribed margin
Shared schedule
Quadratic decrease
Maximum 140 rounds
κ_t
LP round
(b) Remaining free fraction
$\hat{q}_t$
LP round
(c) Freezing at each LP
Fraction of previous free set
LP round
Seed: conditional columns / rows per last-active stratum
2047: 16,384 / 1,024
3141: 16,384 / 2,048
2718: 16,384 / 1,024
